

ALFRESCO

PRODUCT NAME:

ALFRESCO

Alfresco is the premium screen surface intended for drive-in and other outdoor cinema projection installations where image quality matters. With black backing, the flexible uncoated white PVC-based material is manufactured to a unique formulation and specification providing incredibly wide viewing angles, brightness uniformity and image quality in outdoor projection situations.

90th Edition v1.1

Alfresco has been specifically designed for outdoor projection deployments, reducing image and ambient light bleed through, while providing an incredible cinematic experience for patrons in all viewing positions.

Alfresco boasts breath-taking image quality for both 2D and non-polarised 3D projection, the best in brightness uniformity with zero hot spotting and complete laser speckle mitigation.

Features and Benefits

• Suitable for outdoor cinema installations and vastly superior to white painted walls or boards

• Compatible with most free standing or building mounted frame options including fixed frames, scaffold frames, truss frames and inflatable frames

• Washable and durable surface for the more challenging conditions of outdoor projection

• 0.4mm thick robust material to minimise stretching due to wind and environmental conditions

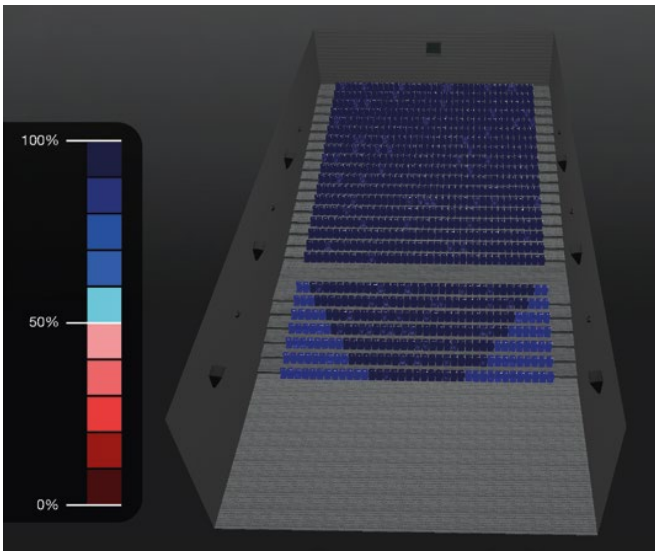

• Flexible Matt White technology designed to distribute projected light evenly thus maximising viewing angles. This allows a good viewing experience from vehicles parked, or patrons viewing from all positions

• Suitable as a replacement surface for leading brands of inflatable outdoor screens

• Non-reflective eyelets and black webbing option

• Black backed to minimise the effects of ambient light from behind the screen and projection bleed through from the front
